Release history:
v0.5 - 11 Mar 2018

The ship designs in this release are based primarily on fluff and inspiration from the Mass Effect game series. Although the Mass Effect universe is very rich, there is very little specific detail regarding ships other than the Normandy. Therefore we've tried to envision how other ships would operate when compared to the Normandy. Obviously a lot of creative freedom was used in creating these designs.

We have spent a lot of time researching, designing and play-testing these designs in the hope they recreate the "feel" of the original material. A lot of compromises have to be made when converting ship designs from the original source material to Full Thrust, so we hope you find they meet your expectations and serve you well in battle.

Also, not every ship from the Mass Effect universe has been brought over at this time. This is only a small sampling of ships for which miniatures are available. We will be adding additional ships in future updates. But if your favorite is not present, please feel free to design it yourself based on other ships in this book and forward it to us for inclusion in the next release.

Thank you for your interest and continued support for Project Continuum!
